EDUCATION

University of Chicago, Chicago, IL

MS in Applied Data Science

September 2026 - December 2027

University of Arizona, Tucson, AZ

BS in Statistics and Data Science | Minor in Economics

January 2024 - May 2026

Magna Cum Laude | Arizona Destination Leader | Assistant to the Chief Financial Officer (AZPM)

PROFESSIONAL EXPERIENCE

Arizona Baseball Software Development Team | Tucson, AZ

Software Developer, Analytics Department

October 2025 - May 2026

- Engineered Streamlit and Plotly dashboards, automating raw data processing pipelines in Python to increase weekly reporting productivity by 2x.
- Developed a predictive hitting trend dashboard synthesizing complex performance metrics, empowering coaches to make rapid, data-driven lineup decisions and increasing scouting efficiency by 20%.
- Designed robust data ingestion scripts to clean and route unstructured performance data into centralized databases, ensuring high data integrity for advanced modeling.

Arizona Wildcat Football Team | Sports Science Department | Tucson, AZ

Data Analytics Intern

April 2025 - May 2026

- Engineered automated data preprocessing pipelines using Pandas and NumPy, reducing manual cleaning time for athletic tracking data by 6 hours per week.
- Developed predictive machine learning and computer vision models using XGBoost, Scikit-learn, and YOLOv8 to assess injury risk, evaluate performance, and automate play classification.
- Designed data visualizations for weekly staff meetings, translating complex statistical models into actionable strategic insights for Strength & Conditioning coaches and athletic trainers.
- Collaborated cross-functionally with sports scientists to identify key biomechanical indicators, bridging the gap between raw data and on-field strategic execution.

Tamid Group, Arizona Chapter | Tucson, AZ

Operational Manager

February 2024 - May 2026

- Directed a team of 6 analysts in executing comprehensive market research and financial modeling for 2 Israeli startups.
- Guided consulting project lifecycles from initial scoping to presentation, delivering actionable, data-informed growth strategies to clients.
- Synthesized large-scale market data to identify competitive advantages, utilizing quantitative modeling to forecast revenue growth and optimize product positioning.
- Organized professional networking events, connecting 50+ student members with industry professionals to expand chapter engagement and career development.

PROJECTS

Computer Vision & Play Classification Model | Python, YOLOv8, Random Forest

- Built an automated machine learning pipeline to classify collegiate football plays (pass, run, sack) from broadcast video using YOLOv8.
- Engineered biomechanical features from joint coordinates and trained a Random Forest classifier utilizing LOOCV to prevent data leakage.

College Football Retention Churn Analysis | Python, XGBoost, SMOTE - **Presented in SunMaRC Conference**

- Developed an XGBoost pipeline to predict transfer portal entries from physical tracking data, implementing SMOTE and Stratified 5-Fold CV to mitigate class imbalance.
- Applied Forward Feature Selection to isolate key performance indicators, achieving an 83% Accuracy, 0.754 ROC/AUC, and Precision of 0.677.
- Built a dashboard using Plotly and Streamlit to deliver the insights effectively and enhance user experience.

SKILLS

Software: Tableau | Github | Quarto | Excel | Positron | AWS | Jupyter | Google Colab | RStudio | Claude Code | Codex

Programming Languages: Java | C | MIPS | Python | SQL (PostgreSQL) | HTML | CSS | JavaScript

Relevant Skills & Packages: Machine Learning | Data Engineering | Statistical Methods | Linear Algebra | Intro to Linear Modeling | Theory of Probability | Sports Analytics | Theory of Statistics | Statistical Computing | Web Scraping | Simulation | Time Series Forecasting | Causal Inference | PyTorch | Scikit-Learn | TensorFlow | Streamlit | Dash

Other Projects: High Intensity Sprinting Regression Analysis | Automated Trade Analysis and Visualization of Stock Market Data using Random Forest | Predicting Player Performance using Machine Learning on NFL, NBA, MLB and EURO Soccer players (All separate projects)
